Advanced reagents for
coagulation analyzers

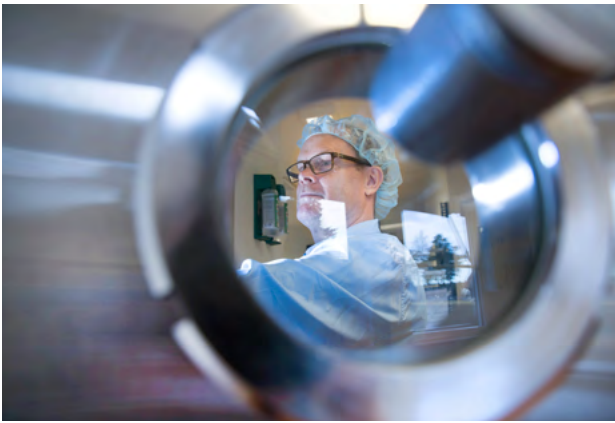

Advanced reagents for coagulation analyzers

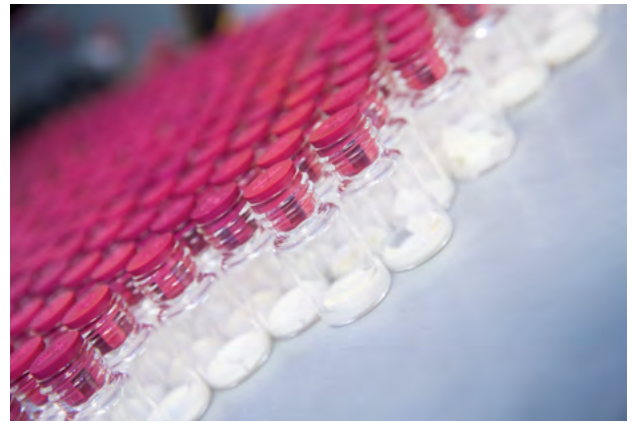

Nordic Biomarker is a Swedish original manufacturer of latex reagents for coagulation and clinical chemistry analyzers.

Nordic Biomarker was started in 2007 to meet a growing demand within the *in-vitro* diagnostics industry for an independent manufacturer and supplier of latex immunoassays for coagulation and clinical-chemistry analyzers. Since then, Nordic Biomarker has grown

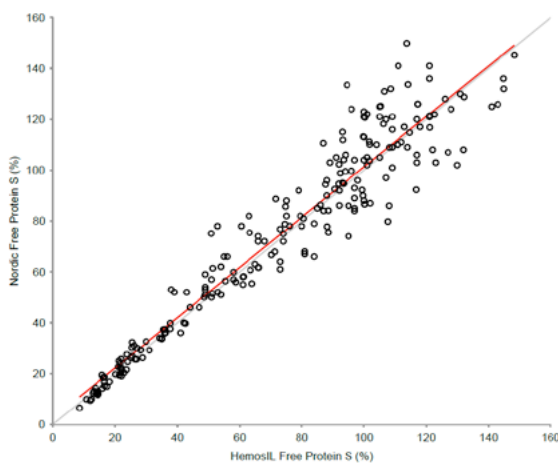

rapidly and is now a well-renowned supplier of high-quality D-dimer latex reagents. Nordic Biomarker is collaborating closely with OEM-clients around the world to deliver customized solutions together with technical support.

Nordic Biomarker's facility is ISO 13485 certified and fully equipped for the production of *in-vitro* diagnostics reagents.

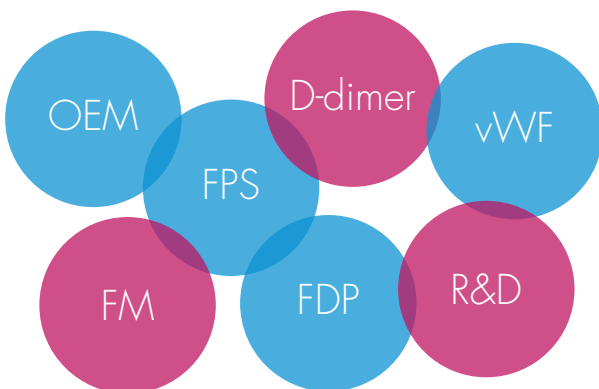

Products delivered from Nordic Biomarker are in the desired format: CE-marked kits, unlabeled vials or bulk reagents.

Nordic Biomarker helps its collaboration partners to develop and validate instrument applications.

Nordic Biomarker invests heavily into research and development of new products.

All production is performed in-house at Nordic Biomarker's own facility in Umeå, Sweden. The production process is flexible to serve all kinds of clients, from a few kits up to large bulk quantities. OEM-bulk production is made against orders to customize the lot size of all kit components and to ensure maximum remaining shelf-life at delivery.

In addition to the on-going production, Nordic Biomarker is also investing heavily into research and development, and has a growing product portfolio with new hemostasis reagents based on the same latex technology as for the D-dimer reagents. The team at Nordic Biomarker has long industry experience and is well educated; most staff either have master's or doctor's degrees. Keeping the R&D and the detailed knowledge about the products close to the production ensures the best possible control over product quality. As Nordic Biomarker's OEM-client, you will be talking directly to the people involved in developing the products! You will get clear answers to your technical questions.

Nordic Biomarker is an interesting collaboration partner for any company seeking to supply the health-care sector with a complete coagulation/ hemostasis reagent package.

- ▶ **Swedish original manufacturer of latex reagents for coagulation and clinical chemistry analyzers**
- ▶ **Serving OEM-clients around the world with customized solutions together with technical support**
- ▶ **Short lead-times and production against orders for maximized shelf-life**
- ▶ **Qualified and fast customer support from highly educated staff**
- ▶ **Continuously on-going research and development and a growing product portfolio**
- ▶ **Collaboration partner for companies seeking a complete hemostasis reagent package**
