

MRX Antithrombin

- ▶ Liquid components, ready to use
- ▶ FXa-based assay
- ▶ Insensitive to Heparin Cofactor II (HCII)
- ▶ Detects both type I and type II AT deficiencies
- ▶ Excellent stability

MRX Antithrombin (AT) is a liquid, functional, chromogenic assay based on the inhibition of FXa in the presence of heparin. The chromogenic AT assay measures the AT activity (functional AT) by a two-stage method as follows: An excess of FXa is added to the citrated plasma sample pre-diluted with saline and in the presence of heparin.

The residual FXa cleaves the peptide linked to the chromogenic FXa substrate, which results in the release of free p-nitroaniline (pNA). The amount of released pNA is measured at 405 nm and the absorbance is inversely proportional to the AT activity in the patient plasma, expressed as IU/mL or %.

DETAILS

Product form	Liquid components, ready to use
Wavelength	405 nm

ANALYTICAL PERFORMANCE CHARACTERISTICS

ACL 9000 has been used for these measurements.

Measuring range	0.15–1.2 IU/mL		
Precision	Sample	Repeatability	
		Mean AT (IU/mL)	CV%
	Level 1	0.45	2.6
	Level 2	0.90	2.1
No interference with	<ul style="list-style-type: none"> ▶ Bilirubin <40 mg/dL ▶ Haemoglobin <150 mg/dL ▶ Triglycerides <500 mg/dL ▶ Unfractionated heparin <330 U/dL ▶ Low molecular weight heparin <330 U/dL 		

STABILITY AND STORAGE

Storage	2–8 °C
Shelf-life	24 months at 2–8 °C
Open-vial stability	4 weeks at 2–8 °C or 48 hours at 12–15 °C

ORDERING INFORMATION

PRODUCT NUMBER	PRODUCT NAME	CONTENT
K5033	MRX Antithrombin	4x6 mL FXa 2x3 mL Substrate

ASSOCIATED PRODUCTS

PRODUCT NUMBER	PRODUCT NAME	CONTENT
